Magnesium Glycinate
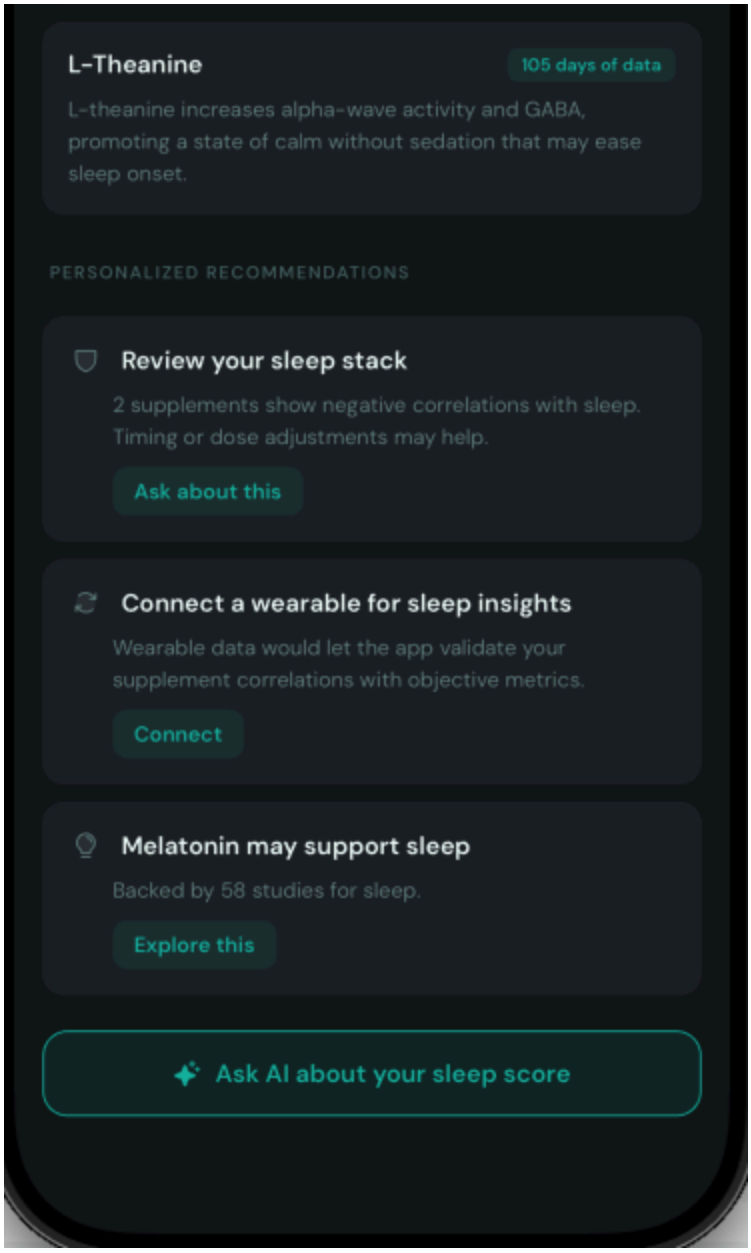
105 days of data
Magnesium is a cofactor in GABA synthesis and NMDA receptor modulation — pathways involved in sleep onset and maintenance.
Lion'S Mane
105 days of data
Human_rct evidence overall, though not primarily studied for sleep; your dose (1000mg) is within the research range (500–3000 mg).



L-Theanine
105 days of data
L-theanine increases alpha-wave activity and GABA, promoting a state of calm without sedation that may ease sleep onset.
PERSONALIZED RECOMMENDATIONS
Review your sleep stack
2 supplements show negative correlations with sleep. Timing or dose adjustments may help.
